

Storm-route school rescue · tutor plan

Isaac · G9 T1 W5 · Set A · 60 minutes · direction, GTR retrieval, tense carry

School alignment: G9 Term 1 · Week 5 · booklet p.23, direction prepositions: **toward / onto / under / away from / through**. GTR Quiz #1 uses the Week 5 list on booklet p.2. This is a face-to-face lesson; teacher guides before independent work.

Arrival diagnostic · 5 min · before any teaching (3 items)

Show individually, no hints. Ask Isaac to say the clue, then note 0–3; do not count this in worksheet /20.

1. At that instant, the flood map ____ (carry) upstairs. **Key:** was being carried (instant in progress).
2. Before the warning bell rang, the gates ____ (lock). **Key:** had been locked (earlier past).
3. The monitor headed ____ the covered path but had not reached it. **Key:** toward (approach, not arrival).

Decision: 3/3 → shorten tense reminder later; ≤1/3 → use two extra oral contrast examples in the 10-min retrieval block, not a passive-basics re-lesson.

60-minute tutor-led route

0–5 | Arrival diagnostic (5) — as above. Record which clue was lost.

5–14 | W4 return + conditional quiz autopsy (9) — If W4 completed pack is present, ask Isaac to point to his own evidence in the timed tense station and explain one self-repair; select at most two errors. If the actual marked GTR quiz exists, log the date, actual mark and 1–2 item types separately. If either is absent, do a neutral two-item oral check and leave its score *pending*; never infer a school result. No W4 answers or W5 quiz score have been received yet.

14–34 | Direction lesson (20) — 4 min tutor models paths with pen and paper; 5 min movement vs position sort; 8 min jointly do class worksheet Zone 2 with Isaac speaking why; 3 min independent transfer into Zone 3. Teach **toward** approach, **onto** onto a surface, **away from** increasing distance, **through** entering and exiting, **under** below. **Boundary:** under can name a static place; *on/at/in* describe location, not a journey. **Onto** requires movement; at the platform and on the shelf can be correct already. If he over-corrects, ask “What moved? From where to where?”

34–44 | GTR quick test (10) — Without word bank, orally define the six targets *plead, notorious, mystical, supercilious, soiling, gobble*; Isaac writes six spellings (1 each, separate unscored practice). Then ask for a short contextual distinction for *social injustice, threaten, wander around, illiterate, sinister, extraordinary*. Correct meaning and form, but do not report this as the school quiz.

44–54 | Mixed tense retrieval (10) — Class worksheet tense items, then oral triple contrast: yesterday *was* + V3; while the whistle blew *was being* + V3; before the whistle *had been* + V3. Alternate active/passive and one already-correct sentence. Ask for time clue before form; don't re-teach voice basics.

54–58 | In-class quick-fire (4) — Open class_game.html; sentence → say full answer aloud → reveal why → self-mark → next. Use missed report for one final correction. Eight or nine cards can be played briskly; stop at 58 if unfinished.

58–60 | Handoff (2) — Give home worksheet (/20, ~20–25 min) and home game (optional extra). Explain exact-word rule and separate answer key page; ask Isaac to self-mark in another colour after finishing.

Board plan · one contrast at a time

MOVEMENT? toward = approach | onto = move to surface | away from = distance grows | through = enter → exit

PLACE? under / on / at / in = position can remain unchanged

TIME? yesterday: was/were + V3 | while: was/were being + V3 | before: had been + V3

Feedback prompts: “Did it move or stay?”; “Does it pass the far end?”; “Which event happened first?”; “Can you name a real error, or should this stay T?” If *was* + V3 appears for an ongoing past event, point to “at that moment,” not the formula first.

After lesson, record only observed evidence: diagnostic /3, class /20, home /20 when returned, false flags, exact-word production, tense switch-points and any real school quiz score/paper if seen. Do not update historical scores from generated materials.
